## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8, drawn to a plasmid DNA construct.

Group II, claim(s) 9-14, drawn to a method for preparing and immobilising a protein on a support.

Group III, claim(s) 15 and 16, drawn to a two-component system.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the common technical feature is a plasmid DNA construct. This element cannot be a special technical feature under PCT Rule 13.2 because the element is shown in the prior art.

The claims lack unity of invention because Applicants' invention is not novel. Keefe et al (IDS reference AS, see entire reference, especially figure 1) teach a plasmid with a His tag, as well as a streptavidin-binding peptide tag. The plasmid also has a kanamycin marker, which will allow for selection and visualization (colonies vs. no colonies). Furthermore, the SBP-tag can also be used for detection. Both tags allow for

immobilization of the proteins, with either a Ni-NTA affinity column, or affinity with streptavidin. Based on the plasmid map in figure 1, there are adapter sequences between the tags and the markers. Although, Applicant defines "frame adapter" in the specification as having a particular sequence, since the frame adapter can be of variable length, the examiner is assuming that even one base in the sequence would apply as a frame adapter. Therefore, absent evidence to the contrary, there is a frame adapter sequence used in the plasmid taught by Keefe et al. An SDS PAGE is performed, so there is quantification at the protein level. The vector has at least *Sall* and *HindIII* sites, therefore there is a MCS. Therefore claim 1 is anticipated by Keefe et al.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
